Q: What is the typical protein percentage of your Hemp Peptide Powder?

A: Our **Hemp Peptide Powder** typically contains between 60-70% protein (dry basis). The exact percentage and Degree of Hydrolysis (DH) are provided on the Certificate of Analysis for each batch.

Q: How does Hemp Peptide Powder differ from standard Hemp Protein Powder?

A: Hemp Peptide Powder undergoes enzymatic hydrolysis, breaking down larger protein molecules into smaller, more easily absorbed peptides. This results in superior digestibility, higher solubility, and lower viscosity compared to standard hemp protein powder.

Q: Is Hemp Peptide Powder a complete protein with all essential amino acids?

A: Yes, despite being hydrolyzed, Hemp Peptide Powder retains the complete amino acid profile of hemp, providing all nine essential amino acids necessary for human nutrition.

Q: What applications benefit most from the enhanced solubility of Hemp **Peptide Powder?**

A: Applications like clear protein beverages, functional waters, protein shots, and liquid nutritional supplements benefit significantly from the high solubility and low viscosity of Hemp Peptide Powder

Q: What is the shelf life and recommended storage for bulk quantities?

A: Our Hemp Peptide Powder typically has a shelf life of 24 months from the manufacturing date when stored in a cool, dry place, away from direct sunlight and moisture, in its original sealed packaging. Specific bulk storage recommendations will be provided with your order documentation.

Q: Do you offer different degrees of hydrolysis (DH) for custom formulations?

A: Yes, we can often customize the Degree of Hydrolysis (DH) to meet specific functional requirements (e.g., solubility, taste, peptide size distribution) for bulk orders. Please contact our sales team to

discuss your particular needs.
